

Enviromental Policy

Environmental Policy

The Group is committed to continual improvements in environmental performance and the prevention of pollution.

The Group recognises that its operations have an effect on the local, regional and global environment within which we people live and work. Having recognised this, the senior management in Lucy is committed to continual improvements in environmental performance and the prevention of pollution. This is achieved through working with environmental regulations, laws and codes of practice that are regarded as setting the minimum standards of environmental performance.

Specific policies are written to cover some of the major environmental aspects and include issues such as Energy use, Waste production, Air emissions, Deleterious materials and Resource use; however, due to a large number of environmental policies, these will be effectively managed and implemented through a coordinated Environmental Management System.

Policy Statements

Energy Use

The Group will take measures to minimise energy use and consumption through the conservation of resources and the use of management tools to train and educate staff in energy awareness.

Resource Consumption

The Group will seek to address its impacts on the environment through the adoption of a sustainable procurement policy; thereby, conserving resources through efficient use and careful planning.

Recycling

The Group recognises that a primary part of its corporate environmental strategy is sustainable waste management, and as such recognises its responsibility to recycle materials, wherever possible.

Disposal of Waste

The Group is committed to minimising waste and controlling its hazardous waste. This means controlling stock levels and using registered and competent licensed waste carriers, as well as disposing of all wastes through safe and responsible methods.

The Supply Chain

The Group will begin to work with suppliers to ensure that they recognise and reduce the environmental impact of their products and its subsequent transportation. The Group will also look for other companies with ISO14001 Environmental Management Standard and a proven track record in environmental performance.

Training Personnel

In order to ensure that all Group employees that come into contact with hazards, environmental issues and situations, the company is committed to implementing its policies through set procedures, guidelines and training. This will be delivered to the relevant personnel at all levels within the organisation and consistently updated.

Targets and Goals

The Group will set environmental targets and goals aimed at improving the overall environmental performance of the company. This will be achieved through the identification of the most significant environmental aspects and the subsequent target to reduce the aspects and likely impact.

Environmental Strategy

The Group recognises that environmental management is amongst the highest corporate priorities, and as a key determinant to sustainable development. The company will periodically conduct formal reviews of its activities to assure compliance with environmental regulations and internal procedures.

All site operations must be conducted in a manner that safeguards health, protects the environment, and conserves valuable materials and resources.

Therefore, the Group intends to improve corporate policies, programs, and environmental performance which take into account technical developments, scientific understanding, consumer needs and community expectations with legal regulations as a starting point with the view to apply the same criteria internationally.
